TECHNICAL SKILLS

Cloud Platforms AWS • EC2 • IAM • VPC

Containerization Orchestration Docker • Kubernetes

Infrastructure as Code Terraform

Automation Ansible • YAML

CI/CD Jenkins

Operating Systems Strong exposure to Linux • RHEL • Ubuntu

Version Control Git • GitHub

Programming Python • Java • C

Databases MySQL • MongoDB

Developer Tools VS Code • Postman

EDUCATION

PROFESSIONAL SUMMARY

Final-year Computer Engineering student with hands-on experience in Linux, Docker, Kubernetes, Ansible, Terraform, and AWS. Developed infrastructure automation and deployment projects including firewall policy automation, RHEL health checks, and Kubernetes-based application deployment. Passionate about DevOps, Cloud Computing, and Infrastructure as Code.

PROJECTS

Kubernetes Notes Application

Docker • Kubernetes

- Built a full-stack Notes Application using Node.js, Express.js and MySQL
- Containerized frontend and backend services using Docker
- Deployed application on Kubernetes using Deployments and Services
- Managed configuration using ConfigMaps and Secrets
- Implemented service discovery for seamless pod communication

Firewall Policy Automation using Ansible

Ansible • Firewallld

- Automated firewall configuration across Linux servers using Ansible
- Managed firewall policies through external YAML configuration files
- Dynamically configured ports and services using loops and variables
- Standardized firewall rule deployment and improved security compliance

RHEL Health Check Automation

Ansible • RHEL

- Developed an Ansible-based framework to validate RHEL server readiness
- Automated verification of OS version, memory availability and system load
- Implemented fail-fast validation using Ansible assertions
- Performed health checks on critical services before deployment activities

CERTIFICATIONS

Getting Started with Ansible Ansible Certificate Code: 10317721
